

QUARTER-WAVE STUB, FREQUENCY SPECIFIC

A Quarter-Wave Stub helps protect the radio electronic parts by providing a DC path for any electrical noise, such as that produced by near by lightning strikes. This assembly is recommended for use with the DGM-RF product line. For proper operation, please specify the exact frequency of the DGM-RF radio when ordering this assembly. The Frequency for which the stub was cut must match the Frequency of the RF transceiver to which it is attached.

BNC T-Connector, all Female
