

SMS TEXT-2-CELLPHONE

Features

- Small Message Service Text-2-Cellphone dramatically reduces response times
- Issue directives to First Responders
- Create responders groups with unique responsibilities
- Intuitive Windows based onscreen displays for easy setup
- Mass notifications possible with use of outside paging services

REQUIREMENTS

- SMS cell phone modem (included)
- Replacement HASP Key, for XP products only (included)
- Data plan with a SIM card (also called GSM/SMS) and acceptable cell phone reception (not included)
- System 3505 (not included)
- Digitize Remote Annunciator (not included)

NOTE: When adding SMS Text-2-Cell to your current Remote Annunciator in XP (the 15" model or the software) the HASP key must be returned to the factory within 30 days, or forfeit the deposit made at time of purchase.

NFPA-72 Compliant

Product Information

Send critical alarm, trouble and/or supervisory and other conditions to first responders and maintenance personnel with SMS Text-2-Cell by Digitize, Inc.

Available as an option on the Digitize Remote Annunciator and Remote Annunciator Software, the Small Message Service Text-2-Cell Option transmits precise, addressable alarm data and user defined text to pre-programmed groups of designated recipients via a cellphone network.

The SMS Text-2-Cell Phone option is a software application installed on the Digitize Remote Annunciator (required) and a SMS Cell Phone Modem, along with a RS-232 DB-9 cable and a 120VAC-12 VDC plug-in power supply (included). The option operates as follows:

When an alarm, trouble or supervisory condition is sent to the System 3505, the System 3505 annunciates, prints, and displays the information along with any user-defined "Who to call, what to do" instructions. The System 3505 then sends the information to the Digitize Remote Annunciator.

The Remote Annunciator, through the installed database, determines to which group (or groups) of first responders to transmit the information. It then makes the calls and sends the alarm and user-defined information/instructions via the cell-phone modem to the authorized personnel. This application can be used for mass notifications when coupled with an outside paging service. E-mail messages can also be sent via the cell phone network.

Programming the database is simple. The SMS Text-2-Cell option is programmed through intuitive Windows based on-screen displays that mirror those found throughout the Remote Annunciator. See typical screen displays on reverse. NOTE: This option was tested with Cingular/ATT and T-Mobile equipment.
